CloudStore
A virtual server for everyone

**Dynamic resources and useful applications.**
CloudStore offers you a dynamic virtual environment at competitive prices.
Configure a server to meet your needs. A wide range of operating systems,
network services and useful applications are available. Using our simple
interface you can adjust service parameters on the fly.
**CloudStore is a powerful, yet affordable tool.**

CloudStore is suitable for small and medium businesses, as well as for entrepreneurs. Customers can select a virtual server to run their services according to their needs. Besides the computational power, customers can also select a variety of operating systems or use their own OS. Additional network drives can be attached to the virtual server.

Beyond the infrastructure layer, the service also includes an application layer. There are multiple preconfigured installations (databases, CMS) and applications available to be installed and run by SWAN (data sharing, security, network tools). All of this is available through a single interface. You can test the environment and the available services free of charge at http://cloudstore.sk

List of operating systems and applications:

SWAN

Service advantages

- Cost-effective server and additional services
- Wide range of operating systems
- SSD drives for high performance and quick response times
- Server production environment cloning
- Possibility to attach a NAS or local storage solution to the server
- Availability of automated daily backup
- Possibility to install multiple applications
- No HW investment necessary

Service use

- Business continuity management
- Data sharing with group and user permission setup
- Data archiving in compliance with legal and accounting regulations and the respective retention periods
- Efficient one-off/intensive short-term use of computational power (projects, campaigns, etc.)
- Remote server and application management anytime and anywhere in the world

Service overview:

Service	Detail
Virtual private server (VPS)	Fully featured virtual servers tailored to your needs
Virtual dedicated server (VDS)	High-performance servers with dedicated disk subsystem
Operating system	Choose from one of 12 available OS (MS Windows, CentOS, Debian, Ubuntu, etc.)
Preinstalled applications	Nextcloud, Safetica Auditor, MailStore, etc.
NAS Storage	External storage connected as an additional network drive
NAS Backup	External storage connected as an additional network drive with RAID 5 data protection
Direct Storage	External disk storage with data stored on redundant disk arrays
Backup disc	External disk storage to backup application data from the customer's server
Virtual Network	Local networks to interconnect different virtual servers and services
